

Medical Freedom, Vaccine Mandate Elimination & Public Accountability

Dr. Nizam Razack believes medical decisions belong between patients and their physicians not government bureaucrats, pharmaceutical lobbyists, corporate pressure campaigns, or politically driven mandates.

Americans deserve transparency, informed consent, scientific integrity, and the freedom to make personal healthcare decisions without coercion, censorship, discrimination, or threats to their jobs, education, or military service.

Public trust in healthcare cannot be rebuilt through fear, intimidation, or censorship. It can only be restored through accountability, transparency, honest investigation, and open scientific debate.

Dr. Razack's Medical Freedom Priorities:

1. End Federal Vaccine Mandates

Support ending federal vaccine mandates tied to employment, education, military service, travel, and public accommodations unless properly authorized through constitutional and transparent legislative processes.

2. Protect Medical Freedom

Defend every American's right to make informed healthcare decisions with their physician without government retaliation, job loss, or discrimination.

3. Restore True Informed Consent

Require full disclosure regarding:

- Potential risks
- Known side effects
- Alternative treatments
- Long-term safety data
- Manufacturer liability protections

Informed consent is not optional. It is a foundational principle of ethical medicine.

4. Independent Investigations & Oversight

Support independent congressional and scientific investigations into:

- Federal pandemic response policies
- Vaccine mandate implementation
- Suppression of scientific debate
- Conflicts of interest between regulators and pharmaceutical companies
- Adverse event reporting transparency

5. Protect Free Scientific Debate

Defend physicians, researchers, and healthcare professionals who present evidence-based medical opinions in good faith. Science advances through open debate not censorship.

6. Increase Adverse Event Transparency

Strengthen public access to vaccine injury and adverse event reporting systems while ensuring independent review free from political influence.

7. End One-Size-Fits-All Healthcare Policies

Recognize that healthcare decisions must consider individual medical history, risk factors, age, and physician judgment not blanket federal mandates.

8. Increase Accountability for Public Health Agencies

Strengthen congressional oversight of federal agencies responsible for emergency declarations, public health guidance, and regulatory enforcement. Unelected bureaucracies must answer to the American people.

9. Protect Employment & Education Rights

Prohibit unlawful discrimination against Americans based solely on lawful medical decisions regarding vaccination status where accommodations or exemptions apply under existing law.

“Medical freedom is not a privilege handed down by Washington. It is a constitutional right that belongs to every American.” — Dr. Nizam Razack
